TETON GUITARS ANNOUNCES RAREFIED TOPS ON ALL 2016 GUITAR MODELS Rarefied vs Torrefied Wood

Teton Guitars announces rarefied solid wood tops on all guitar models produced in 2016. Rarefaction provides the same benefits of torrefaction without wood discoloration. This chemical-free, low heat process ages solid tops in a vacuum environment before entering guitar production without affecting the appearance of the wood.

Teton Guitars is now manufacturing rarefied guitars that are entering the 2016 market starting at \$299 MAP. The tonal improvement of these guitars with such an affordable price can be heard and appreciated by everyone.

About Teton Guitars

With over a century of experience in the music industry, Chesbro Music introduced Teton Guitars with a dedication to independent music artisans by producing quality instruments at affordable prices. Noteworthy guitar models include the 2014 NAMM introduction of the 10-string STJ150ENT-10, with the octaves E and A removed for a cleaner bass. At the 2015 NAMM Show, the Teton Range Guitar STR155NT introduced a new mini jumbo shape. The STA150CENT-AR arm rest auditorium was introduced at 2016 NAMM.
